

01 COMPETITOR & INSPIRATION MAP

01 / 10

Brand	Why Relevant to LoopNote	Core Audience	Creative Message	Makes Users Feel
★ TalkNotes	Closest direct competitor : voice → text → summaries → tasks. Functionally almost identical.	Entrepreneurs, creators, students	Turn messy voice into something usable	Relief
Otter.ai	Market leader in voice-to-text + meeting notes. Largest user base in category.	Enterprise sales teams, students (25–34)	Never miss what was said in a meeting	Safe
Jamie	AI meeting notes, no bot, privacy-first. High-end positioning for regulated industries.	Executives, lawyers, regulated industries	No bot in your meeting — your data is yours	Professional, Private
Granola	No bot, frictionless device-level capture. VC/founder darling, \$1.5B valuation.	Founders, VCs, PMs, tech workers	Be present. Notes handle themselves.	Focused & present
Fathom	Free-first individual meeting notes. Fastest growing in the personal productivity segment.	Professionals, founders, individual contributors	"Never take meeting notes again." — zero friction, generous free plan	Effortless

Strategic Gap

Most competitors compete inside the meeting room. Jamie and Granola both position around 'no bot', but for different reasons: Jamie owns privacy/compliance, Granola owns presence/flow. Fathom owns zero friction. Nobody owns the shower idea, the run thought, the 2am voice memo. That's LoopNote's territory.

02 CREATIVE PATTERN RESEARCH

02 / 10

Links sourced from Meta Ad Library, TikTok (Creative Center), YouTube, APP store and Product Hunt.

#	Brand	Link / Source	Format	Hook or Core Message	What to Learn
01	Otter.ai	facebook.com/ads/library → search: "otter ai"	UGC Problem/Solution	<i>"I'm not going to be able to have everything straight because I'm still checking..." person at desk, real office chaos behind her.</i>	Open with loss-of-control. The failure state is the hook.
02	TalkNotes	producthunt.com/products/talknotes	Founder Text Post	<i>"Google Docs sucked. I built my own. 1,500 users in 2 months."</i>	Founder frustration = instant credibility. No polish needed.
03	Wispr Flow	producthunt.com/products/wisprflow	App Store Review	<i>"I've dictated tens of thousands of words. There is no going back." — real user</i>	Real user language beats brand copy.
04	Jamie	https://www.youtube.com/watch?v=ga9olt_ajpo	Product Demo / Brand Video	<i>"Jamie seamlessly stay in the background without annoying bots..." Focus on presence without distraction.</i>	"No bot joining" is the entire value prop. → say what the product doesn't do to earn trust before showing what it does.
05	Fireflies.ai	instagram.com/reel/C3S9ih9p5cn	UGC Testimonial	<i>"I never remember a time before I used Fireflies. How the f*** did we do it before?" — real person, no script feel.</i>	"Before/after" doesn't need a split screen. One sentence of genuine disbelief does the same job.
06	Granola	instagram.com/reel/DVbk9J_mE4f	Product Demo	<i>"Capture pics, add to your notes." Fast cuts: photo snapped → notes structured instantly.</i>	The transformation speed is the hook. No narration needed. voice in → tasks out, show the gap closing.
07	Fathom	instagram.com/reel/DTu6dfPkuhE	UGC Creator Testimonial	<i>"Stop being a court reporter in your own meetings." Tired creator → instant bullet summary.</i>	Sell presence, not recording. Attack the behavior, not the problem. → "Stop transcribing your own thoughts."
08	Notion	youtube.com/shorts/u3NI0ogn4g8	Creator Tutorial	<i>"3 ways I use Notion AI" — creator walks through real personal workflow, screen recording of actual usage.</i>	Showing specific use cases beats generic feature lists. The format makes abstract AI feel immediately actionable. → "3 things I stopped forgetting after using LoopNote."

01 The pain that keeps showing up: ideas captured, never acted on.

Every creative that landed named a moment where the user already felt they had failed. The recurring wound isn't inability to record. It's the gap between recording and doing.

03 Creators and founders are the most persuadable and most useful first audience.

Testimonial (Fathom) and Founder Story (TalkNotes) both target people who generate ideas constantly and share tools publicly. Winning one creator is worth dozens of passive sign-ups.

05 The whitespace: every moment outside the meeting room is uncontested.

Most competitors live inside meetings. But few claims the run idea, the shower thought, the 2am voice memo. This scene is completely open and it's where LoopNote's core behavior actually lives.

07 The best benchmarks gave the audience something to perform, not just watch.

TalkNotes' Product Hunt post sparked replies. Jamie's video invited "this happened to me" comments. Fireflies' "how the f*** did we do it before" made people tag friends. The relatability anchors within these campaigns created a social moment — LoopNote's creative should always leave an open door for the audience to respond.

02 AI-powered productivity and save time are dead phrases.

Used uniformly across Otter, TalkNotes, Granola, and every weaker industry trope. Viewers have developed immunity. Any LoopNote ad that opens with efficiency language is invisible before it starts.

04 Spend time in the problem, not the product.

UGC Testimonial (Fathom), Product Demo (Jamie), Pain Montage (Notion) — all spend most of their runtime in the problem, not the product. Viewers need to feel seen before they're ready to be sold to.

06 Avoid copying the before/after meeting notes frame.

Competitors have all run this. It reads as a category ad, not a brand. LoopNote running the same frame positions it as a cheaper Otter, not a different product.

03 PERFORMANCE DATA READ — COST PER PAID START

Core metric: Cost per Paid Start (Spend ÷ Paid Starts). Target < \$90. Best in dataset = C05 at \$62. Goal of next round: beat \$62.

★ Best ✓ On target (<\$90) ✗ Off target

ID	Platform	Format / Concept	Spend	Thumbst op	6s Hold	CTR	Trials	Paid	\$/Paid Start	Status
C01	Meta	UGC: “I used to leave every meeting with 4 tabs open...”	\$4,800	36%	24%	1.7%	267	59	\$81	✓
C02	Meta	Static: “AI notes in one tap”	\$3,200	25%	—	0.9%	133	35	\$91	✗
C03	Meta	Founder talking head: “Why we built LoopNote”	\$2,700	18%	11%	0.6%	54	12	\$225	✗
C04	TikTok	Creator skit: “POV: boss asks what was decided”	\$5,100	45%	31%	2.4%	300	42	\$121	✗
C05	TikTok	Screen-record: “Turn a voice memo into a task list”	\$4,400	39%	27%	2.1%	338	71	\$62	★
C06	TikTok	AI avatar: “Meet your AI productivity assistant”	\$3,000	22%	15%	0.8%	64	9	\$333	✗
C07	YouTube	Before/after: “Before vs. after meeting notes”	\$4,700	38%	22%	1.3%	235	63	\$75	✓
C08	YouTube	Tutorial: “3 ways students use LoopNote”	\$3,900	33%	29%	1.1%	112	13	\$300	✗
C09	Meta	Creator testimonial: “120 voice notes → 18 tasks”	\$5,500	41%	26%	2.0%	306	67	\$82	✓
C10	TikTok	Trend remix: “Things I stopped doing after using AI”	\$3,800	50%	35%	1.9%	174	20	\$190	✗

Best performer

C05 \$62

Screen-record, TikTok

High engagement, wrong crowd

C10 \$190

50% Thumbstop, only 20 paid starts

Worst conversion

C03 \$225

Lowest Thumbstop 18% : brand story fails

TOP 3 — Scale or Learn From

C05 \$62 / paid start

Screen-Record Demo · TikTok

Real product in action. Voice memo → task list.
No polish. Lowest cost in entire dataset. This
format + scene should anchor the next round.

C09 \$82 / paid start

Creator Testimonial · Meta

“120 voice notes → 18 tasks.” Specific number
+ human voice. Consistently reliable Meta
performer. Confirms: real people + real
numbers converts.

C07 \$75 / paid start

Before/After · YouTube

Visual mess-to-clarity. No narration needed.
Outcome over feature. The format works, but
the scene (meeting) can be refreshed to voice
memo graveyard.

BOTTOM 2 — Pause or Deprioritize

C10 \$190 / paid start

Trend Remix · TikTok

Highest Thumbstop in dataset (50%) but only 20 paid starts. Trend content
attracts entertainment viewers, not buyers. High engagement is a vanity
signal here, not performance.

C03 \$225 / paid start

Founder Talking Head · Meta

Lowest Thumbstop (18%), lowest CTR, worst conversion. Brand-led
storytelling about “why we built this” fails consistently. Users don't stop
scrolling for a brand's origin story.

What the data says about next direction — and where it aligns with research

- Screen-record + UGC formats consistently outperform polished branded production on both platforms.
- Specific numbers in the hook drive higher paid conversion than abstract benefit claims (C09 vs C02).
- Data + research align: C05's non-meeting voice memo scene (\$62) is both most efficient and most uncontested.
- High Thumbstop ≠ high conversion. C10 proves trend formats attract the wrong crowd for a paid tool.

Campaign Line

"Ideas don't die when you forget them. They die when you record them."

OBJECTIVE

Test whether self-deprecating humor around the voice memo graveyard drives cost per paid start below \$62 — the current best — while opening audience territory no competitor has claimed.

Learning goal: Does guilt + humor = better conversion than pure product demo?

TARGET AUDIENCE

Primary: Busy Creators & Founders, 25–38. Produce ideas constantly. End up with a chaotic archive where nothing lands. Not lazy. Just buried in their own output.

SECONDARY Productive Professionals, 28–42. High meeting volume. Run separately with meeting-scene creative.

CORE PAIN POINT

Good ideas don't arrive at your desk. They hit in the shower, mid-run, at 2am — when your hands aren't free. So you record a voice memo. But there are already 8 versions sitting untouched. This is version 9. Capture without resolution, twice over: the idea almost escaped, then it escaped anyway — just slower.

EMOTIONAL ARC

CORE INSIGHT

"Every idea you record dies the moment you hit stop — unless something brings it back."

This reframes recording itself as the problem — the behavior users thought was responsible turns out to be where ideas go to be forgotten. That cognitive shock earns the scroll-stop. LoopNote's hero moment: the graveyard becomes a Loop.

The Graveyard

"Your voice memo app is a cemetery. And you're the only mourner."

TikTok

UGC Humor Skit

20–25 sec

0–3s HOOK

Creator faces camera, dead serious:

"Today, I'd like to hold a funeral.
For my ideas."

3–18s BODY

Phone screen opens: voice memos packed wall-to-wall. Creator taps through one by one, in a solemn eulogy voice:

"Idea v1... never opened again. Idea v2... same. Idea v3... you already know."

Gets to v8. Looks up, eyes empty:

"Born the moment I hit record. Died the same second."

→ Energy shift: all recordings dropped into LoopNote. Screen fills with AI summary, key themes, three next steps. Creator: grief → shock → biggest smile.

"...They're alive??"

18–22s CTA

Back to camera. Shrug. Points at screen.

"Good ideas deserve a Loop.
Not a headstone."

Text on screen:
Start your Loop. Free →

WHY THIS WORKS

Funeral framing gives absurd ceremony to something everyone does, letting voice memos pile up. It's ridiculous enough to be funny, true enough to sting. The resurrection moment earns genuine surprise because the pain was real. Comments will fill with "RIP idea v1–v47", organic reach at zero spend. Screen-record demo delivers product proof at peak emotional moment. The graveyard / Loop contrast is the brand name made visual.

The One That Got Away

"The best ideas always die somewhere between the shower and the towel rack."

TikTok

Meta

Fast-Cut Skit + Demo

20–25 sec

0–3s HOOK

Black screen. White text: "Have you ever had a genuinely great idea — and just... watched it leave?" → Cut immediately to scene one.

Scene 1: The Run

Creator mid-jog, earbuds in. Stops dead — eyes wide, points at nothing. Cut to: same creator on couch post-run, staring into middle distance, shoes still on. Soul slightly gone.

"It left."

Scene 2: The Shower

Creator humming in bathroom. Humming changes — new tune, electric, hand slapping shower wall to keep rhythm. Cut to: bathroom door, hair half-dry, phone in hand, trying to hum it back. Nothing comes out right.

"That one also left."

Scene 3: The 2am Idea

Creator in bed, eyes suddenly open. Sits up slightly. Internal war: do I get up and write this down, or— They roll over.

"Gone. Completely gone."

18–20s PIVOT: *"Or — you could just open LoopNote."* → Screen-record: voice spoken mid-run, LoopNote transcribes in real time, auto-structures into idea card. | CTA: *"Good ideas shouldn't die on the way home." Start your Loop. Free →*

WHY THIS WORKS

Three scenes, three settings, three versions of the same loss — viewers recognize themselves in at least one before the video is halfway done. "It left. That one also left. Gone. Completely gone." builds like a joke: because the pain is the punchline. Covers "pre-capture" pain that other concepts don't touch. No competitor owns this scene. Both TikTok and Meta compatible. Mirrors C05's screen-record format for conversion efficiency.

Version 9

"I'm not someone who lacks ideas. I'm someone who runs a very unsuccessful archive."

Instagram

Creator Testimonial

25–28 sec

0–3s HOOK

"I have to come clean.
I am a serial entrepreneur."

[beat]

"The business I keep starting...
is voice memos."

3–20s BODY

"I have an ongoing series in my voice app called 'this idea is important.' Currently on season nine. Every season ends the same way — never opened twice."

Scrolls memo app: IMPORTANT, !!!, unnamed timestamps.

"I'm incredibly talented at capturing things. It's just... everything after that is a little fuzzy."

[Direct eye contact]

"...Same?"

→ All memos → LoopNote. Clean summary + 3 next steps appear. AI note: "This idea connects to something from 3 months ago."

Creator: ??? → !!!

20–25s CTA

"Turns out I don't have an execution problem. I just never had a Loop."

Text on screen:
Start your Loop. Free →

WHY THIS WORKS

Serial entrepreneur of voice memos breaks expectation and earns the view. Incredibly talented at capturing, fuzzy on everything after reframes guilt as irony : users feel seen, not judged. The "Same?" pause is an open door: comments become a competition for who has the most unplayed recordings, and that comment section is the social proof that sells the product. Mirrors C09 logic (\$82/paid start, on target).

Core principle: Thumbstop and CTR are signals ; Cost per Paid Start is the answer.

PLATFORM & BUDGET

TikTok first, Meta in parallel.
Total budget: \$9,000 · 2-week window

01 The Graveyard	TikTok	\$3,500
02 The One That Got Away	TikTok+Meta	\$3,000
03 Version 9	Meta	\$2,500

METRICS TO WATCH

★ <u>Cost per Paid Start</u>	Primary Metric < \$62
Trial-to-Paid Rate	Secondary Metric > 22%
Thumbstop Rate	Leading Metric > 35%
6s Hold Rate	Leading Metric > 25%

SCALE / REVISE / KILL

↑ SCALE	< \$62 & trial-to-paid > 22%, 3 days stable → double budget + create 2–3 variants of winning hook
↔ REVISE	\$62–\$90 → change ONE variable only (hook line or length). Never overhaul the full concept.
↓ KILL	> \$120 or < 30 trial starts in 7 days → pause, shift budget to best performer. Log failure cause.

Note: Thumbstop & CTR are process signals only.
High engagement ≠ right audience.

2-WEEK DECISION TIMELINE

Day 1–3	Day 4–7	Day 8–10	Day 11–14
Launch all 3 concepts at low budget. Monitor Thumbstop and 6s Hold daily.	Check Trial Starts. Any concept with Thumbstop < 20% → revise hook immediately.	First full data review. Kill weakest concept. Consolidate budget into top 2.	Identify winning concept. Plan next-round variations and scale.

Following Steps:

Does humor and guilt around the voice memo graveyard drive Cost per Paid Start below \$62 — the current best?

Yes → Emotional territory no competitor has claimed. Scale it. No → Data shows exactly where it broke. We take that learning into the next round. Either result is useful.
